

Network Operations Centers Ensuring Optimal Network Performance

Brought to you by

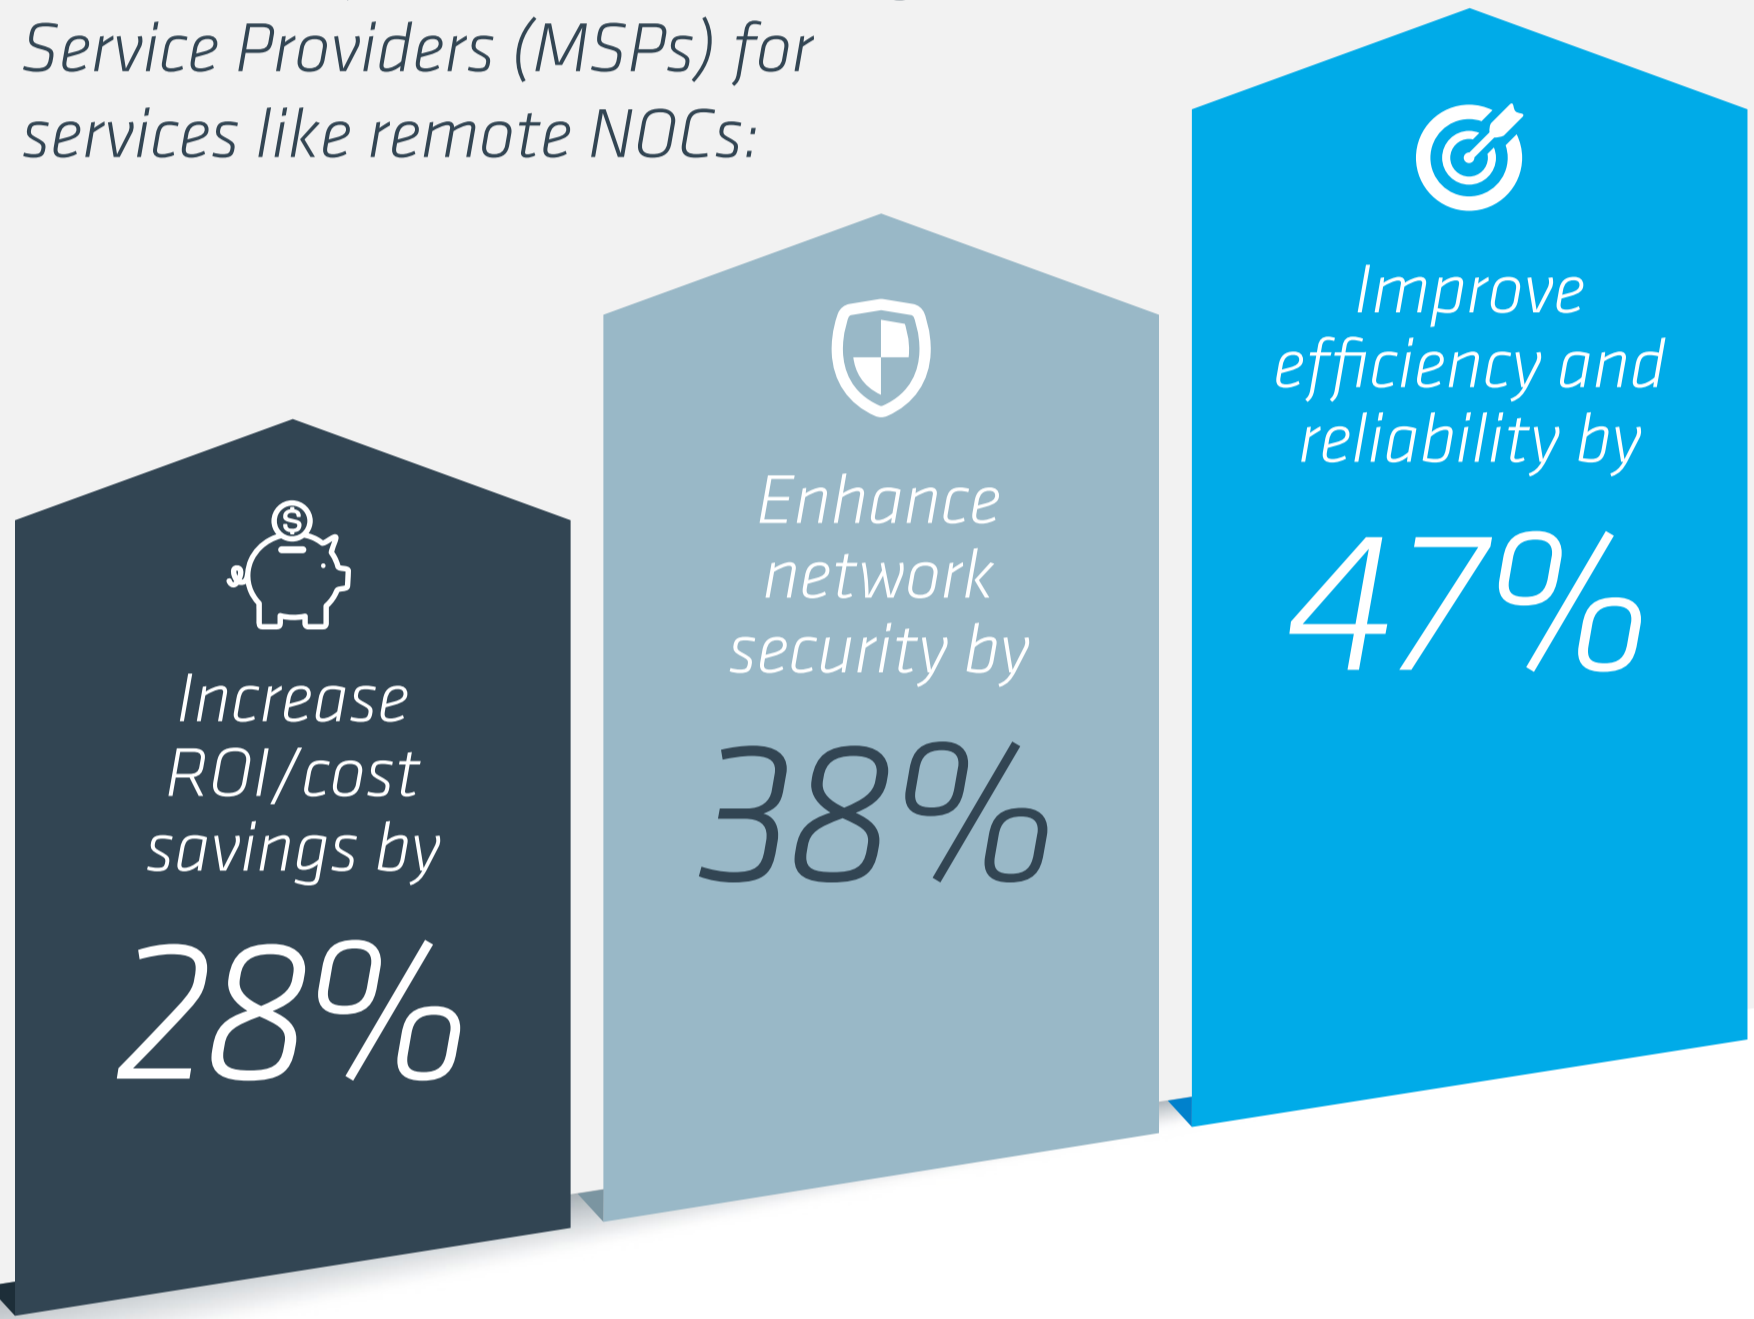

16.7%

of all cyberattacks world wide target Internet Service networks

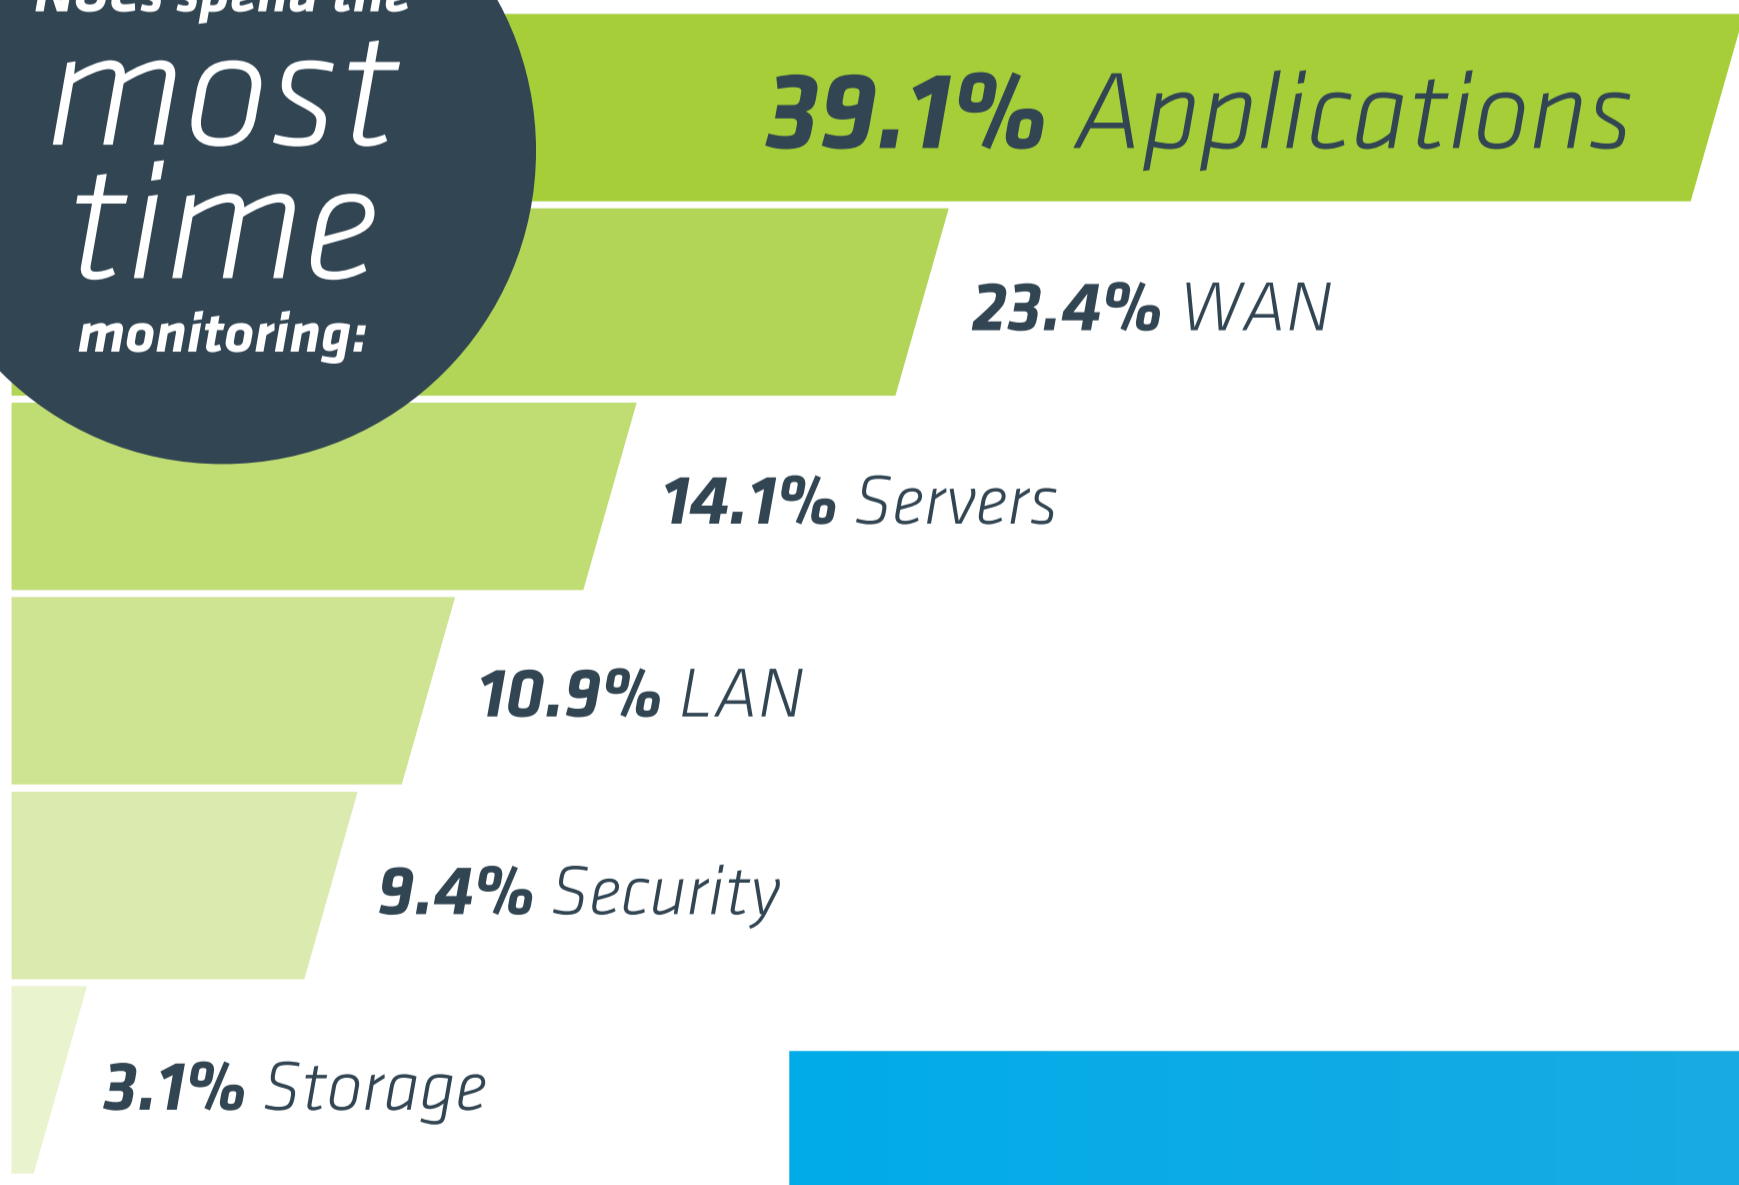

24/7 network monitoring can help prevent and/or mitigate damage from cyberattacks

The value of outsourced Managed Service Providers (MSPs) for services like remote NOCs:

NOCs spend the **most time** monitoring:

What do NOCs Do?

- » Reduce risk and downtime
- » 24x7 monitoring to ensure your network is at optimal performance
- » Proactively identify and resolve issues before they become major problems
- » Troubleshoot, escalate, and resolve network problems
- » Ensure SLA commitments can be met
- » Report server and overall network performance and utilization
